Project –

Airline Data Management and Analysis Using Power BI

Task 4th

Calculating Using DAX

Solution Steps –

First, I navigated to Modeling > New Measure to create a measure for total passengers using the following DAX formula:

```
Total Passengers = COUNT(passenger_information[PassengerID])
```

Next, I created a measure for **Total Tickets Booked** using this DAX formula:

```
TotalTicketsBooked =
CALCULATE(
    COUNT(Ticket_Information[TicketID]),
    FILTER(Ticket_Information, Ticket_Information[BookingStatus] = "Confirmed")
)
```

To display the **Best Flights**, I inserted a **Table visual** and applied a filter to show only rows where the status or category is "Best".

To display the overall results, I added **Card visuals** to show the **Total Passengers** and **Total Tickets Booked**.

Finally, I enhanced the visual appeal by customizing the visuals — adjusting **colors, font sizes, and other formatting** to make the dashboard more engaging and user-friendly. And I also add Slicer for showing result.
